PROJECTS

Schipper Translate extension

Schipper Translate is a Chrome extension I built with HTML, CSS, and JavaScript to provide quick, on-page translation for any website. It's lightweight, easy to use, and designed to stay out of the way while giving you fast access to language translation. Translation can be done in-extension, as a tooltip, or in-text.

Schipper Statlines

Schipper Statlines is a comprehensive baseball database modeled after stathead baseball's versus finder. I made this using HTML, CSS, JavaScript, Python (with Flask and SQLAlchemy), and Postgres SQL. Users can compare players and teams to one another with a wide variety of stats and awards to compare. You can try it out in the projects section of my website linked below. The code for this in Github is split up between the website and SchipperStatlines repositories, frontend in website and backend in SchipperStatlines

noahschipper.net

noahschipper.net is my personal website. It is built with HTML, CSS, and JavaScript. Visitors can check out my résumé, GitHub, and social media, view and interact with my projects, contact me, and learn more about me, all in one place.

WORK EXPERIENCE

Walgreens, Cedar Falls, IA – Customer Service Associate

August 2024 - PRESENT

-Provided friendly, efficient service to customers, assisting with purchases, returns, and product inquiries.
